BOARD OF PUBLIC WORKS

Dear Ms McDonald,

I wish to let you know that I strongly support moving forward with the Dominion Cove Point L.N.G Export Project. Dominion has a well established record of environmentally friendly care and activity. This export of LNG will have a positive impact on the world environment for natural gas being a rather clean fuel would replace much of the noxious fuels being used in developing nations.

In addition the tax revenue to Calvert County would enable our county to build needed roads and schools. In fact the quite significant tax income will help alleviate the burden on our state of Maryland especially for school construction. Since Calvert County is rapidly growing, we will need additional schools for several generations to come, and as a former high school teacher in Calvert County I am particularly interested in providing the very best for our youngsters. I well remember my early days of teaching when Calvert County was the poorest county of the state and school facilities were far from adequate.

All in all the significant benefits to the world, to our wonderful state of Maryland as well as to our Calvert County well out weigh the minor environmental impact that the Cove Point Project may entail. Please promote it.

Sincerely,

Leonard J. Elter
