Dear Ms. Bose,

I believe it is critically important to increase all forms of available energy sources. In our rapidly changing world, we have greater and greater need for energy, and today, we have the technology to bring that energy to the world. We are blessed to have access to excess natural gas, and it is our duty to share that resource with other countries that so desperately need it. Our LNG plant at Cove Point is an ideal location to ship to other countries and brings sorely needed income and opportunity to our residents.

Your Environmental Assessment was extensive and clear: there will be no significant impact to the environment. Moreover, the export operations will allow Dominion to continue to conserve the surrounding 800 acres as a nature preserve. With the sound science and already existing infrastructure behind us, we can do the right thing and contribute to clean global energy and help our community to thrive at the same time. Thank you for giving your final approval on this project today.

Best Regards,

Mary Jo Bevard
